

STATION 1

PROBLEM IDENTIFICATION

The displays in this station provide background on this study and describe some of the work that has been completed to better identify the existing and future transportation problems and issues in Northwest Butler County. Travel and safety needs have been identified through analysis of existing conditions and input from the Advisory Committee and the public, the people who live, work and travel in and through this area everyday.

All eight townships in this area and the City of Oxford have recently adopted future land use plans that are important guidelines in understanding the future needs and vision for this part of Butler County. With population growth anticipated, the need to plan for the future is now.
