

Travel Safety: Improve vehicular and pedestrian travel safety

- Identify and correct existing roadway deficiencies that contribute to unsafe travel
- Address vehicular / pedestrian conflict issues on the Miami University campus and in Oxford's Uptown

Considerations:

- Address identified safety problem areas (intersections and road sections with high accident rate history),
- Upgrade roads to safe standards in terms of lane and shoulder widths,
- Reduce vehicular / pedestrian conflict points or areas,
- Consider access management needs (existing and future land use), and
- Provide separation of through and local travel needs to improve safe property access.
